

DATAVID BECOMES PART OF C5I, ENHANCING KNOWLEDGE GRAPH CAPABILITIES FOR ENTERPRISE GENERATIVE AND AGENTIC AI

Dataavid Limited's acquisition by Course5 Intelligence Limited ("**C5i**"), through its wholly owned subsidiary, aims to strengthen a shared foundation in graph data engineering, knowledge graphs, and semantic modeling for Large Language Model [LLM] grounding, supporting business-ready generative and agentic AI solutions.

London, UK – 20th April 2026

Dataavid Limited has been acquired by C5i, a strategic step that brings together the complementary strengths of both organizations to deliver scalable, enterprise-grade AI solutions for regulated industries powered by trusted, contextualized data.

Headquartered in Mumbai, C5i is a pure-play data analytics and artificial intelligence ("AI") company focused on delivering measurable business impact for enterprise clients using the combined application of human expertise and AI-driven solutions. The company helps global enterprises turn data into intelligence that powers decision-making, automated actions, and business impact at speed and scale. C5i brings together deep industry domain expertise and advanced capabilities in data science, data engineering, AI engineering, and applied AI, along with a suite of products & accelerators, to help organizations solve complex business challenges and create sustainable value. The company works across key industries, including life sciences, technology, media, telecom, consumer goods, retail, manufacturing, and banking and financial services.

Through its platform, Agent5i, C5i has been deploying generative and agentic AI use cases across its global client base in areas such as supply chain and network planning, customer 360, product engineering, marketing optimization, and risk management. The addition of Dataavid's experience in graph data engineering, knowledge graphs, and semantic modeling will further enable C5i to help its clients move beyond traditional data pipelines and build context-rich data foundations that improve how AI systems understand relationships, meaning, and business context across disparate data sources.

As enterprise AI evolves toward more autonomous, agent-driven decision systems, this combined foundation becomes increasingly important for delivering outputs that are not only intelligent, but also explainable, trustworthy, and ready to support action at scale.

For Dataavid's clients and partners, access to C5i's scaled AI, analytics, and enterprise transformation capabilities will help enable them to extend knowledge graph and semantic data foundations into end-to-end, production-grade AI solutions.

The group will provide a holistic solution in the life sciences industry where Datavid's strengths in structuring complex scientific, clinical, and R&D data complement C5i's strengths in commercial analytics and industry-scale AI delivery. Together, this creates a more connected life sciences value chain.

Together, Datavid and C5i are positioned to help organizations turn fragmented data into connected, AI-ready knowledge, enabling faster research, better decisions, and more scalable generative and agentic AI applications.

CEO and Co-Founder of Datavid, Balvinder Dang, commented:

"Most enterprises have fragmented, context-poor data that limits what AI can meaningfully do with it. Knowledge graphs aim to solve that foundational problem. They try to bring structure, relationships, and context to complex multi-source data, giving AI systems something they can genuinely reason over rather than just pattern-match against. Datavid has been helping organizations in regulated industries connect complex, multi-source data into coherent, queryable knowledge structures that AI can actually reason over. Partnering with C5i brings together complementary depth in analytics and AI implementation and gives our clients a more complete path to AI that doesn't just generate outputs, it supports decisions that people can understand, defend, and act on with confidence."

Ashwin Mittal, Executive Chairman and Managing Director, commented:

"The future of enterprise AI will be driven by large language models and agentic systems that can understand and act on enterprise knowledge. Knowledge graphs provide the critical context layer that allows AI to reason across vast amounts of structured and unstructured data. This acquisition aims to strengthen C5i's proposition to clients to build intelligent systems that move from insight to autonomous action in several domains, including supply chain optimization, customer 360, risk, product engineering, marketing optimization, and others. We will also aim to provide a holistic value proposition for the life sciences industry by combining our strength in commercial analytics with Datavid's expertise in R&D and scientific applications."

As part of C5i, Datavid should be able to scale its capabilities across a broader global client base while benefiting from C5i's strengths in AI, analytics, and enterprise platforms, including Agent5i. Clients will gain access to a wider set of capabilities to drive more actionable, scalable, and decision-ready AI outcomes.

Equirus Capital acted as the exclusive financial advisor to Datavid and its shareholders.

About Dataavid

Dataavid is a data & AI company that helps organizations transform fragmented, unstructured, and siloed data into AI-ready knowledge at scale. Dataavid delivers outcomes that matter: regulatory-grade data governance, enterprise semantic layers, knowledge graph foundations, composable AI architectures, and large-scale data unification. As knowledge graphs become critical for LLM grounding and enterprise AI reliability, Dataavid is designed to help enterprises ensure their data is contextualized, secure, explainable, and semantically aligned to power Generative and Agentic AI systems.

About C5i

C5i is a pure-play data analytics and artificial intelligence (“AI”) company focused on delivering measurable business impact for enterprise clients using the combined application of human expertise and AI-driven solutions. The company helps global enterprises turn data into intelligence that powers decision-making, automated actions, and business impact at speed and scale. The company drives value through a comprehensive solution set, integrating multifunctional teams that have technical and business domain expertise with a robust suite of products, solutions, and services tailored for various horizontal and industry-specific use cases. C5i caters to many global companies across industries, including technology, consumer goods, life sciences, and others. The company has been recognized by leading industry analysts like Gartner, Forrester, and Everest Group for its AI & Analytics capabilities and proprietary AI-based solutions.
